DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-2, 4-6 and 10 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Moorehead et al., U.S. patent No. 6,562,885 B1.

Moorehead et al., teach the application of an electrostatically charged aerosol halogen-based agent for decontamination of irregular surfaces potentially contaminated with chemical or biological warfare agents. Electrostatic charges are set such that the charge is sufficiently different from that of the surface to ensure retention of the treating agent for a time period long enough to affect decontamination. See column 6, lines 1-20, column 13, lines 55-67 and column 14, lines 4-60.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/059,258

Art Unit: 1744

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 3, 7-9 and 11-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moorehead et al., as applied to claims 1-2, 4-6 and 10 above, and further in view of Simm et al., U.S. patent No. 3,608,821 and Barditch U.S. patent No. 4,704,942.

Simm et al., teach the known and expected charge for halogen-based aerosol applications and Barditch teaches that charged aerosol agents are known and expected in the destruction of biological warfare agents.

It would have been well within the purview of one of ordinary skill in the art to charge the particles of the halogen-based agent in Moorehead to an optimally effective point to retention on the surface to be treated and at a rate which will optimally achieve such decontamination. It is further noted that it is well recognized, as evidenced by Barditch, that charged, halogen-based aerosols are effective against biological warfare agents, which would be inclusive of Anthrax.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Krisanne M. Thornton whose telephone number is 571-272-1279. The examiner can normally be reached on Mon.-Wed. 6:30am-4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert J. Warden can be reached on 571-272-1281. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9310.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0661.

KRISANNE THORNTON
